

Case Study

PROJECT > STAYBRIDGE SUITES

LOCATION: Hamilton, ON

DEVELOPER: Vrancor Group

PRODUCT: CGC SECUROCK® Glass Mat Sheathing

Easy to Handle; Guaranteed to Perform

SECUROCK® glass-mat sheathing panels are encased in a double-sided, green-coloured fiberglass facer and are easy to score and snap with no saws or special tools required.

With the addition of SECUROCK® glass-mat sheathing, construction professionals can count on CGC for high-performing, easy-to-use building products for both inside and out. “We cannot control the weather on the construction site, but we have manufactured a product that can better withstand exposure to the elements,” say Julie Del Monte, Product Manager, Panels, CGC Inc. “Securock glass-mat sheathing panels enable you to stay on schedule, on spec, and on budget.”

CGC SECUROCK® glass-mat sheathing is a non-combustible, moisture- and mould-resistant panel designed for use under exterior claddings where conventional gypsum sheathing products have traditionally been used, such as brick veneer, properly detailed Exterior Insulation Finish Systems (EIFS), clapboard siding, panel siding, shingle siding, shake siding and conventional stucco.

SECUROCK® glass-mat sheathing panels are approved for use by leading EIFS companies, compliant with ASTM C1177, listed in 19 ULC designs and 157 UL designs for fire resistance, and score a 10 on ASTM D3273.

The panels can be exposed to the elements for up to 12 months and are guaranteed for five years against manufacturing defects. SECUROCK® glass-mat sheathing panels are available in both 1/2" and 5/8" Firecode Type X.
